

CLIMATE CHANGE: A CONVENIENT TRUTH

Jim Hollingsworth

jimhollingsworth@frontier.com

Draft 17B

Finally, a book on climate that anyone can understand. If you master the forty-eight short chapters in this little book you will be well on your way to understanding the basics of climate change: Man's part and Nature's. This is a book that needs to be read more than once and then shared with your friends. Careful reading should convince you that even a majority can be wrong.

Will the World Really End In Eleven Years Unless We Act Now?

Anyone with a Sixth Grade education knows that the climate is always changing. But will climate change be the end of the world? Now children with little education are saying They are ashamed of us because we don't make an effort To stop climate change.

Climate alarmism does not see what a valuable Contribution oil and gas have made to our economy. Stopping the use of fossil fuels now would be a Disaster for the world.

Climate Change: A Convenient Truth
Lays it all out in simple language.

INTRODUCTION

A lot has been written about global warming/climate change, especially in the last couple of years. We have been led to believe that if we do not take immediate, expensive and decisive action the world as we know it will come to a dramatic end.

But, is it true? Where is the evidence that man is the cause of this warming? Can we do anything about it, or do we just let nature have its way?

No-one can dispute the fact that the earth is warming. It has continued to warm since the end of the last ice age, about 10,000 years ago. At one time North Idaho was buried under a mile of ice.

But what is the evidence that man is the chief cause of this warming, or that we can stop a further increase in temperature simply by ending our use of all fossil fuels, (coal, oil, natural gas etc.)?

This book was written for you. It is time that you had a chance to know the truth. The mainstream media wants to convince you that we are headed for a catastrophe if we simply do nothing. Twelve years ago we were told we only had ten years left, yet those ten years have come and gone without any change in our climate.

There are three types of people who consider climate change.

1. The first is the government paid scientists and those associated with them who will not be convinced no matter what is said, because if they had to admit they were wrong it would end their employment.
2. The second are those who only watch television, never pick up a book and really do not want to know the truth until their house goes dark and it is too late to do anything about it.
3. The third group includes a large number of people who have received much conflicting information and still do not know the truth, yet they seek to understand it.

So, in which group are you? This book was written for the third group. It is written so you can understand climate change and how it affects you. You have to understand that the program of the first group has to do with a lot more than just climate. You can have no effect on them unless you know the truth.

You can seek to know the truth, or you can continue to ignore it. It is important, however, that each one of us not only knows the truth, but does something about it, to get our government to

take a stand on doing what is right. This book details most of the important issues of climate change.

Finally, are you going to believe everything put out concerning the Green New Deal and similar programs, or will you take a couple of hours to read this book and then do something about it? I trust you will.

CONTENTS

Dedication

Introduction

1. 97 Percent Agreement
2. 100 Percent Renewable Energy
3. Acid Rain
4. Albert (Al) Gore
5. An Inconvenient Lie (Resources)
6. Antarctic Ice Shelf Melting
7. Arctic Ice Shelf Melting
8. Atmospheric Carbon Dioxide Increasing
9. Benefits of Carbon Dioxide
10. Capitalism versus Environmentalism
11. Carbon Dioxide
12. The Historical Perspective on Climate Change
13. Why Climate Change Alarmism Isn't Science
14. Climate Change Settled
15. COP 24 Climate Conferences
16. Coral Reefs Dying
17. DDT Pesticide: *Silent Spring*
18. Dr. Willie Soon is Right
19. Droughts and Rainfall
20. Electric Cars in Cold and Hot Weather
21. Electric Cars: A History

22. Extinctions: Animal and Plant
23. Extreme Weather
24. Floods
25. Forest Fires
26. Fracking and Modern Oil Production
27. Gasohol
28. Georgetown Texas and 100 Percent Renewable Energy
29. Green New Deal is Socialism
30. Greenland and Glaciers
31. History of Coal
32. History of Hydroelectric Power
33. History of Nuclear Power
34. History of Oil
35. Home Solar Panels
36. Increasing Carbon Dioxide Rate (Is It True?)
37. Katrina and Hurricanes: 2005-2017
38. Ocean Acidification: What Does It Mean?
39. Ocean Warming
40. Oil Discovered in Alaska
41. The Pause in Temperature Rise
42. Polar Bears: Numbers Increasing: Not Threatened
43. Pollution: Air and Water
44. Portland Oregon and Renewable Energy
45. Sea Level Rise
46. Solar Power
47. Wind Energy
48. Wind Health Hazards

APPENDIX 1 1941 Dept of Agriculture Paper on Climate: Analysis

APPENDIX 2 Hansen/Hollingsworth *Storms of My Grandchildren*

APPENDIX 3 My Testimony

APPENDIX 4 Myth of Global Warming: Short Paper

APPENDIX 5 The Father of Climatology Speaks

APPENDIX 6 Paradise Fire In California

APPENDIX 7 Climate Change Reconsidered: Lists

CONCLUSION

So, you have read the book. Do you still believe that the Green New Deal and everything that goes with it is true? This book has presented part of the truth. You can either accept or reject it. The choice is yours.

If we follow the program of the climate alarmists, the chicken little folk who believe we have to spend trillions to stop an imaginary climate change, then we will not provide for a constructive tomorrow; we will just be part of the continuing problem.

There were some great principles in the founding of America, which allowed us to use our coal, oil and natural gas to make America the greatest nation in the world: A nation that was ready and able to help other peoples when they had dire needs from floods, earthquakes, fires, and other calamities. If the program of the Green New Deal becomes the law of the land we will never be able to help the needy again.

There is much more to climate change than was shared in this book. Some of that is contained in the appendices which follow. There is also a list of great books, each one of which has more of the truth about climate change.

Will you go on living in the dark, or will you take the time to inform yourself so that we can continue to live in the light? Climate alarmism is a fraud, and hopefully you have seen that by reading this short book. But there is much more to understand. I trust you will make the effort to do so. If you believe the information in this book is wrong then I would encourage you to do further research. There is lots of information on the internet; just search for climate change, climate alarmism, or climate skeptics.

No matter what, thanks for taking the time to read this short book. Please share it with your many friends.

The following are some of the endorsements of the book.

ENDORSEMENTS

“Jim Hollingworth’s book, *Climate Change: A Convenient Truth*, is a breezily-written short book that is worthwhile to anyone who is curious about this “global warming/climate change” phenomenon that has been sweeping Western Civilization since the 1980s and has now become a multi-trillion-dollar industry. The book comprises forty-eight (very short) chapters, plus seven Appendices (for anyone who cares to read more on the topic, in-depth). Its non-intimidating, simplistic style should not offend anyone — whether you’re in middle-school, or college, or have been away from school for 50 years.” - **Daniel W. Nebert**, BA [biochem], MS [biophys], MD [pediatrics/genetics], Department of Pediatrics & Molecular Developmental Biology, Division of Human Genetics, Cincinnati Children's Hospital, Cincinnati, OH 45229, Consultant, Department of Anesthesia, Stanford University Medical Center, Stanford, CA 94305

“As a litigation attorney for nearly 30 years, I know a lot about evidence. The evidence presented for climate change simply does not add up. There is no basis for saying the science is settled or 97 percent of scientists support global warming theories. Many highly qualified scientists have shown that there is no threat from carbon dioxide. Jim Hollingsworth shows the valid evidence. His book is an important resource for those who want to know what the science really shows.” - **Richard Botteri**: Attorney at Law

“Hidden in this small book is all the information one needs to fully understand the frauds which are being perpetuated on society by environmental extremists desiring to foist their miserable personalities upon an unsuspecting public. Hollingsworth moves from the now exposed acid rain fraud of yesteryear to the biggest fraud ever perpetrated on society, man caused Climate Change. This deception has now cost the nations of our planet well over a trillion dollars in the belief that man is more powerful than Nature and thus can set the Earth’s thermostat.

Without ever getting into the weeds of math and science anyone with a tenth grade education will be able to understand precisely how they have been hoodwinked these many years. A four hour investment in reading time will yield multiple eureka moments.” - **Jay Lehr**, Ph.D. Senior Policy Analyst for the International Climate Science Coalition and former Science Director of The Heartland Institute

“*Climate Change: A Convenient Truth* is a vital, complete, and above all truthful presentation on climate science. Science must pursue the untainted truth. This book dispels the confusion that exists about "climate change" because politics and money rather than science are involved in

promoting anthropogenic global warming. Regardless of your background, you will benefit from learning the truth about climate science.” - **Bernard "Bernie" Kepshire**, Ph.D., M.S., B.A., fisheries biologist: background includes Alaska Department of Fish and Game Oregon Department of Fish and Wildlife, and Oregon State University

“This book is much needed to give people an impartial view of what is really happening to our climate and what is not happening. All of us tax payers are in fact funding billions and soon trillions of dollars to be spent on “decarbonizing” our atmosphere even though CO₂ is food for all plants. I hope that many people start asking more questions about the logic of today’s energy policies after having read Jim’s well written book.” - **Lars Schernikau**, PhD, Energy Economics

“Jim Hollingsworth’s new book, *Climate Change: A Convenient Truth*, lays it all out – in short, readable chapters that address virtually every fear-inducing claim concerning climate change – and finds them wanting. If you’re worried about dangerous manmade climate change, but still have an open mind, this is a must-read. If you’re already skeptical, but want an easy-to-use reference guide, this is what you’ve been looking for.” - **Paul Driessen**, Author of *Eco-Imperialism: Green Power-Black Death* and many articles and books on energy, climate change, human rights and the dark side of renewable energy, Senior Policy Advisor, Committee For A Constructive Tomorrow (CFACT)

“My good friend Jim Hollingsworth has written a very accessible book on the sham, scam, and hoax of global warming hysteria. Folks, there is nothing to be afraid of, and Jim's informative book will settle whatever fears you may have. Give it a read - you won't be disappointed!” - **Bryan Fischer**, Host of "Focal Point" on the American Family Radio Network
